GENERAL INFORMATION
Humic DG is a uniform granule which utilizes The Andersons
proprietary dispersible granule (DG) technology. Each granule
will disperse into thousands of particles with irrigation or
rainfall, facilitating incorporation of the product into the soil.
The hard granule has a low moisture and dust content,
allowing it to be easily blended with other components, such
as urea-based fertilizers.

Humic acid products, such as Humic DG may increase or
enhance micronutrient uptake while improving and
replenishing depleted soils.

DIRECTIONS FOR USE
Apply as directed or as advised by your Andersons
representative or local agronomist. Some situations will
require higher use rates and/or more frequent applications to
produce significant benefits.

For best results, after application, water area with a minimum
of 0.3 inches of water. Product will self-incorporate into
coarse textured soils. Cold weather and/or cold water (lower
than 45°F / 7°C) can result in slower particle dispersion.

Humic DG can be applied to all crops, including vegetable
crops, row crops, herbs and field crops; trees; shrubs; vines;
turf; ornamentals; nursery; xeriscaping; garden landscaping
and potting soils.

CROPS (BROADCAST) – Apply at 40 pounds per acre or
higher as a broadcast treatment, one to two times annually.
Best when applied in fall, post-harvest or early spring. May
be used at pre-plant up to first blossom or anytime fertilizer
is applied. For severely carbon depleted soils, apply 40-500
pounds per acre.

CROPS (IN-FURROW/BANDED) – Apply 4 -10 pounds per
acre in-furrow or as a banded treatment.

TURF - Apply 40-200 pounds per acre per year. Apply 1-2
lbs. per 1,000 sq. ft. anytime during the growing season. Can
be applied after aeration as a top-dress treatment. If desired,
mix with the sand media. Apply and water-in for self
incorporation. Make additional applications to deficient areas.

TREES, SHRUBS – Apply 2-8 oz. as a band around the base
of each tree or shrub. Larger trees and shrubs should use the
higher rate.

ORNAMENTALS AND BEDDING PLANTS – Apply 1-2 pounds
per 1,000 sq. ft. as a broadcast treatment in ornamental
landscaping and garden areas.

POTTING SOILS – Mix 2-10 lbs. per cubic yard of potting mix.
